

HEAT EXCHANGER

5

ABSTRACT OF THE DISCLOSURE

10 In order to enhance the working efficiency of
assembling a heat exchanger in which two types of heat
exchangers are integrated, there is provided a heat
exchanger in which the size of the dummy tubes, which are
the third tubes arranged in the portion between the first
and the second radiator, and that of the first and the
second tubes are made to be the same and further the size
15 of the fins arranged between the dummy tubes and that of
the first and the second fins are made to be the same.
In order to reduce the occurrence of defective brazing of
the separator to the header tank and in order to make it
possible to easily repair the defective brazing portion,
20 there is provided a hole in a portion of the header tank.
